

# Fruit Prevents Danger?!

Fruit is an essential part of a healthy and balanced diet. Especially tropical fruit! It can be rich, juicy, flavourful and sweet or sour, bitter, tasteless, and disgusting. I prefer the first option and I'm sure you do too! I'm writing this article to help you find out which fruits have the best or danger preventing benefits.

The first fruit that we're going to discuss is the sweet and delicious papaya! Papayas are a sweet fruit and grow in tropical regions. They have multiple varieties. Papaya has lots of benefits including, protection against heart disease, reduced inflammation, aid in digestion, boosting your immune system and lots more!

Guavas are the next fruit we're talking about! They're a sublime fruit and are a great and rich source of fibre, antioxidants and other nutrients such as Vitamin A, B and C. Its benefits are made possible due to its many properties, including anti-oxidants, anti-diabetic, anti-hypertensive, anti-inflammatory, analgesic, hypo-cholesterolemic, anti-spasmodic, anti-microbial and astringent properties. They're a close favourite in my opinion!

The last fruit is a blood orange! They are filled to the brim with anthocyanins, Vitamin C and A, Folic acid and much more! They're my fave. They look unusual because they're red!

I hope that you learnt loads about tropical fruits! You should search up tropical fruit benefits to find out!
