

Super cars

staring Daithí McNulty the newsround reporter

Flying cars Tim Dukhovny, Constantine Kislly, Pavel Markin and Oleg Petrov invented a flying car called ALEF Aeronautics in 2015 at San Mateo, California, USA. They were inspired to design and build a flying car from watching the 1985 American science fiction film movie, Back to the future. The development team has introduced the ALEF model A, the dubbed production version of the drivable flying car that has vertical take-off landing capabilities.

Boat cars In 1961 Hans Trippel invented the amphibious car that can drive on land and even on the water. The amphibious car was invented in New Jersey. It was made so it can help the military personnel cross rivers, lakes or seas while under attack from enemies. Today amphibious vehicles are not just for military purposes anymore.

who knows what the next type of car will be but I'd look forward to learn about it anyway.
